THOMAS YEOH

+1 (669)-799-7334 | tyeoh@berkeley.edu | tyeoh9.github.io/tyeoh | www.linkedin.com/in/yeoh

Education

University of California, Irvine Expected: Dec 2026
Master of Computer Science

- Coursework: Design and Analysis of Algorithms, Artificial Intelligence, Neural Networks, Distributed Systems

University of California, Berkeley Graduated: May 2025
B.S. Electrical Engineering and Computer Science

- Coursework: Data Structures & Algorithms, Graphics, Machine Learning, Databases, Computer Vision, Computer Architecture, Probability & Optimization
- Activities & Awards: Cal Leadership Scholarship, Google Developers Club (VP of Strategy)

Skills

Languages: Python, Java, C++, HTML, CSS, JavaScript, SQL, R, Bash, Assembly, Scheme
Technologies: Linux, GCP, AWS, PyTorch, Pandas, Git, Flask, React, Node.js, Streamlit, Docker, Jupyter, Kubernetes

Experiences

Apple Inc. Cupertino, CA
Software Engineer Intern June 2026 – Sep 2026

- Reduced the Ad delivery time for Apple Maps Search requests by 37.5%, improving the overall user experience.
- Analyzed and simulated traffic to design a Redis cache, achieving a hit rate of 95% and saving 36M API calls per day.
- Spearheaded a high-throughput solution using Java/Spring, integrated into a Kubernetes-based system (AWS EKS).

Zoofi AI (Fintech AI) Sunnyvale, CA
Software Engineer Intern June 2025 – Aug 2025

- Built the core Python backend infrastructure and agentic platform to deliver the MVP, attracting the first 3 users.
- Automated document parsing and extraction using Google ADK for client onboarding, cutting manual effort by 60%.
- Integrated external APIs and implemented FastAPI endpoints with Pydantic models for validation.

Berkeley Operations & Behavioral Analytics Lab Berkeley, CA
Research Assistant Jan 2024 – May 2025

- Performed data analysis and manipulation using Pandas on behavioral datasets to validate empirical findings.
- Leveraged HPC clusters in Unix/Linux environments for parallel and distributed computing.
- Optimized mathematical models and the data pipeline, accelerating pre-computation speeds by 44% using efficient algorithms such as dynamic programming.

Keysight Technologies Penang, Malaysia
Software Engineer Intern May 2024 – August 2024

- Designed and shipped a web app, leveraging NLP to analyze request forms and reduce human review time by 25%.
- Built an end-to-end pipeline with Python, Flask, and data structures to efficiently process over 120k data points daily.
- Utilized various libraries (Keras, Sklearn) for advanced data modeling and analysis on large datasets.

Projects

RookieDB (Java, SQL)

- Implemented a SQLite-like database in Java using policies such as multi-granularity locking and ARIES recovery.
- Utilized data structures like B+ trees and join algorithms, improving information retrieval and query execution speeds by ~30%.

Live Traffic Monitor (GCP, Docker, Streamlit)

- Deployed a web app to analyze live traffic congestion levels across California using OpenAI's vision API.
